

Phase 1.4 Monte Carlo — N=10,000 simulations
 Coptic Gospel of Thomas → sampled Syriac translation → catchword detection
 Threshold=0.65, Filter=80.0%

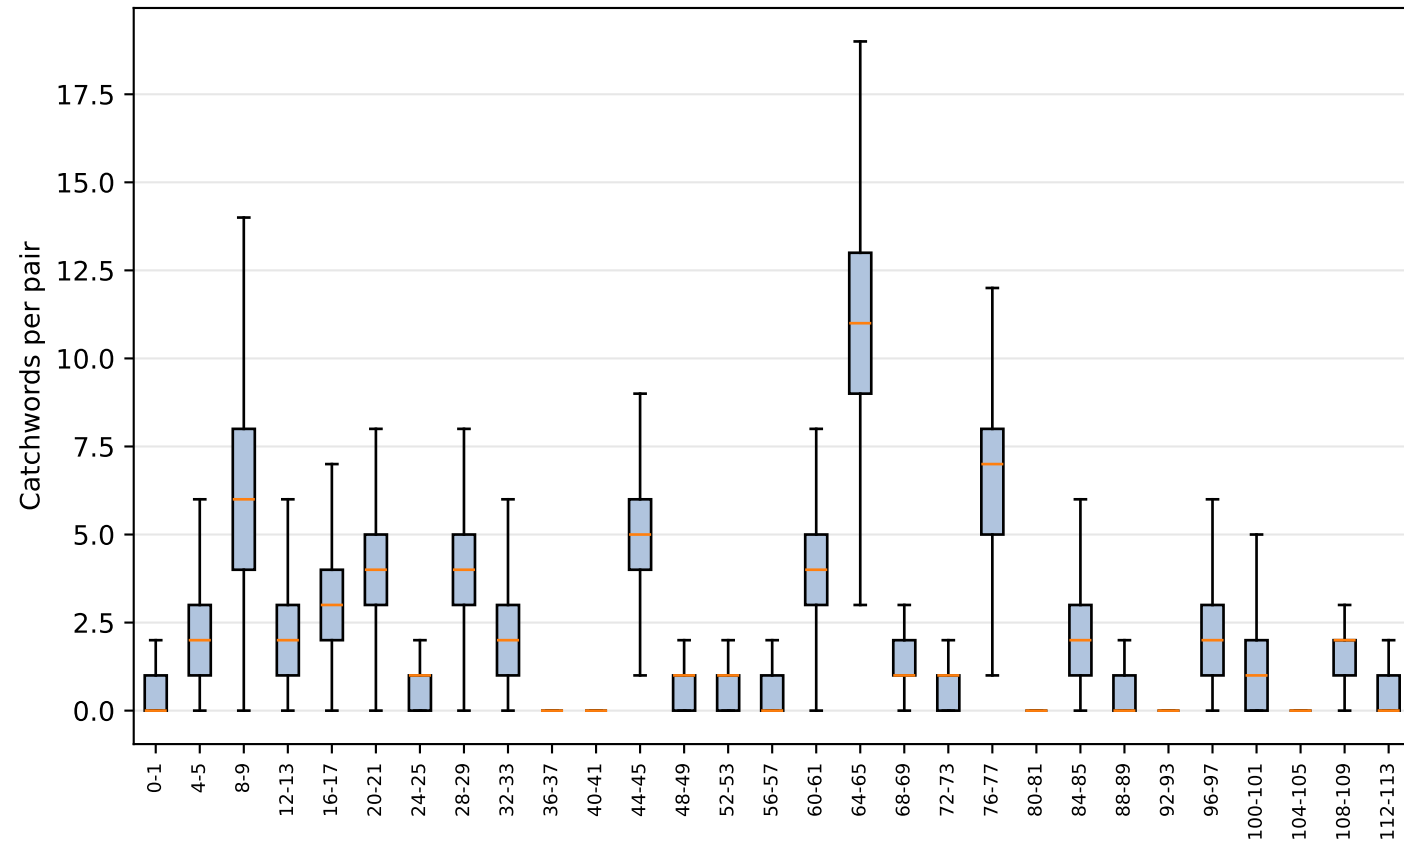

(a) Total catchwords per simulation
 $P(\text{MC} \geq 502) = 0.0000$

(b) Connectivity per simulation
 MC both ~ 45.4% MC iso ~ 20.0%

(c) Per-pair distribution (every 4th pair shown)
 All 114 adjacent pairs span the x-axis

(d) Perrin's specifically cited pairs — robustness under MC
